VMC LLC Selected by FAA for Instrument Landing System Installation at Delaware County Airport

Minneapolis, MN, June 30, 2025 — VMC LLC has been awarded a contract by the Federal Aviation Administration (FAA) to oversee the replacement and installation of a modern Instrument Landing System (ILS) at Delaware County Airport (MIE) in Muncie, Indiana. The new ILS system will improve aircraft approach precision and reliability, supporting safe flight operations in a range of weather conditions.

The multi-phase contract includes system planning, engineering design, site preparation, and equipment installation, with VMC leading each phase in close coordination with FAA technical teams. Final system commissioning will be conducted by the FAA, with VMC providing on-site support to ensure a smooth transition to operational status.

“This award reflects the FAA’s commitment to innovation and safety, and we’re proud to be part of that mission. Our team brings deep experience in aviation systems and a clear understanding of the complexities and operational realities airports face.” said Angela Merrifield, President of VMC.

Robert Varani, Vice President of VMC, added, “This is a meaningful opportunity to support the FAA’s infrastructure modernization efforts. We’re honored to bring both technical leadership and field-tested execution to a project of this importance.”

The project is expected to progress over multiple phases in the coming years, with VMC delivering all services and documentation under FAA oversight.
